

In-App Messaging SDK v2.1.2 for Android contains the following bug fixes:

## 1. Custom ttr\_duration not functioning correctly

**Symptom:** Once the ttr\_duration field has been changed by the host application as part of the branding configurations, the SDK should display an Android snackbar for the same period of time. However, the snackbar was previously only appearing for 3 seconds.

**Fix:** A code has been added to ensure that this field will be considered from the host application.

## 2. Plurals lp\_ttr\_message\_minutes & lp\_ttr\_message\_hours not functioning correctly

**Symptom:** When an agent changes their response time, the SDK should display an Android snackbar with the message: “An agent will respond within the next XXX minutes / hours / days”. However, only the following partial message was previously being displayed: “An agent will respond within”.

**Fix:** A code has been added to ensure that this field will be considered from the host application. In addition, a comment has been added warning users to be careful not to override the “%1\$s” part in the field lp\_ttr\_message\_with\_timestamp.
